

CLAIM AMENDMENTS

1 - 14. (canceled)

1           15. (new) An adapter adapted to fit with a power track  
2 having grooves holding conductors, the adapter comprising:  
3           a first dielectric housing shell;  
4           a second dielectric housing shell fittable with the first  
5 shell and having a retaining surface;  
6           a control shaft fittable between the shells and having a  
7 retaining surface; and  
8           a retaining formation on the first shell and snugly  
9 engageable with one of the retaining surfaces.

1           16. (new) The power-track adapter defined in claim 15  
2 wherein the one retaining surface is the retaining surface of the  
3 second shell.

1           17. (new) The power-track adapter defined in claim 15  
2 wherein the one retaining surface is the retaining surface of the  
3 control shaft.

1           18. (new) An adapter adapted to fit with a power track  
2 having grooves holding conductors, the adapter comprising:  
3           a first dielectric housing shell;  
4           a second dielectric housing shell fittable with the first  
5 shell and having a retaining surface;  
6           a control shaft fittable between the shells; and  
7           a first retaining formation on the first shell and snugly  
8 engageable with the retaining surface.

1           19. (new) The power-track adapter defined in claim 18  
2 wherein the first retaining formation is a spring tongue having a  
3 hook end, the second shell being formed with a throughgoing aper-  
4 ture immediately adjacent the retaining surface, the shells being  
5 fittable together with the hook end engaging through the aperture  
6 and locking on the retaining surface.

1           20. (new) The power-track adapter defined in claim 19,  
2 further comprising  
3           a membrane hinge unitarily formed with the first and  
4 second housing shells.

1           21. (new) The power-track adapter defined in claim 19  
2 wherein the first retaining formation is unitarily formed with the  
3 first housing shell.

1           22. (new) The power-track adapter defined in claim 21  
2 wherein the first retaining formation is elastically deformable.

1           23. (new) The power-track adapter defined in claim 18,  
2 further comprising  
3           a second retaining formation on one of the shell and fit-  
4 table with and capable of holding the control shaft.

1           24. (new) The power-track adapter defined in claim 23  
2 wherein the second formation is formed as a fork that can  
3 elastically deform to hold the control shaft.

1           25. (new) The power-track adapter defined in claim 24  
2 wherein the control shaft can rotate freely when held by the second  
3 formation.

1           26. (new) The power-track adapter defined in claim 23  
2 wherein the second formation is formed as a pair of forks that can  
3 elastically deform to hold the control shaft.
